DAS401

4 bay storage with RAID & eSATA

The DAS401 is a compact RAID tower utilising the latest SATA II port feature, where one single eSATA cable connects to four 3Gbps SATA II hard drives. Designed with easy installation in mind, the trayless DAS401 allows instant installation by simply inserting the hard drives after opening the protective ventilating cover. The unit supports JBOD and Spanning modes for instant storage expansion. It also supports RAID 0,1,0+1,5,5+spare via included software utility, for high performance and hard drive redundancy. The package includes a 2-port eSATA PCIe card at no additional cost, which allows the connection between two DAS401 units (up to 8 hard drives) using only two cables.
